Personal Projects

I have developed a fully functional E-commerce web store using React and Firebase, featuring dynamic product listings, user authentication, a shopping cart, and real-time database integration. The project emphasises responsive design and a seamless user experience. Additionally, I created a deployable Chess game using React, implementing complete game logic, move validation, and an intuitive interface, showcasing my skills in component-based architecture and state management.

SKILLS

Web Development (Front End)
Database Management (SQL)
OOP and Data Structures (C++)
Frameworks: React, Firebase,
Node.js

Critical thinking skills
Excellent communication skills
Exceptional organisational
skills
